Its file format, DWG (Graphical Interchange Format), is analogous to the PostScript format and SVG, both of which are widely used today as computer file formats. Prior to AutoCAD's introduction of its current DWG format, a number of competing file formats existed. AutoCAD provides DGN and DWG interchange with other CAD programs. In 1986, the company introduced AutoCAD to the world for the first time, which started the AutoCAD revolution in drafting and design. History In 1969, the team at the University of Minnesota launched the prototype for AutoLISP, an object-oriented programming language. The University of Minnesota students created a programming language and installed it in AutoCAD. At that time, AutoCAD was only a few hundred lines of code. During the 1970s, an AutoCAD developer named John A. Holland moved from the University of Minnesota to the Computer Sciences Corp. (CSC) in Minneapolis to work on making AutoCAD more powerful. He developed the programming language VDLL, and the.NET APIs, which CSC had a patent on. Shortly after, in the mid 1970s, the first version of AutoCAD was released to the public. During the 1980s and 1990s, AutoCAD was integrated with some other software, such as Partition Manager, PowerDraft, and Starbase. In 1980, the company was purchased by Autodesk, Inc. After the acquisition, Autodesk announced that some of the Autodesk employees would be laid off. Many of these people created the AutoLISP programming language and the.NET APIs. In 1995, after the purchase of Grasshopper Geomatics, Autodesk developed the Grasshopper plug-in that allowed Autodesk products to work together in a coordinated fashion. This proved to be a success and the product sold well, eventually becoming Autodesk 3ds Max. In 2001, Autodesk released the Digital Design Exchange (DDX) plugin. In 2008, Autodesk released eDrawings and started the eDrawings Gallery. In 2009, Autodesk released Project Online and Project Server. In 2010, Autodesk released Design Review. In 2011, Autodesk launched a new version of AutoCAD. It is faster, more reliable, easier to use, easier to design and easier to create forms. It allows users 5b5f913d15
