AutoCAD LT 1.5 became a web-based application in 2003. AutoCAD LT 2009 introduced Cloud-enabled, online drafting and design and design cloud services. In 2010, Autodesk launched AutoCAD Mechanical, a new, cross-platform mechanical design product. AutoCAD Mechanical was later followed by AutoCAD Civil 3D for building design in 2012. AutoCAD Architecture was released in 2013 for iPad, web and Windows. AutoCAD 3D Architecture was released in 2015 for iPad, web, and Windows. AutoCAD

Map 3D and AutoCAD Map 3D Civil were released in 2015 for iPad, web, and Windows. Apple's macOS Mojave 10.14.3 Beta (2019) macOS app availability Apple also made their app store available for download to the App Store, which is available for macOS. Notable features Apple's iOS App Store allows users to purchase and download applications for free or for a nominal price via iTunes, the App Store's software application. Some notable features of AutoCAD are: A drawing is displayed in the main window. The default view is 2D layout. All drawing objects, including text, are dynamically displayed as you edit a drawing, saving you time. You can easily add, delete, and move objects in the drawing space. Interactive capabilities are made possible by transparent windows that snap to the drawing space.

A view is automatically created at the cursor position for drafting views. Working on a drawing with other drawings open is very convenient. The application automatically opens the last open drawing when you start AutoCAD. AutoCAD also supports many third-party extension languages. Extension language files are stored in the support folder. AutoCAD

Command-line programming AutoCAD, like many CAD software packages, also includes a command-line and batch programming interface. It supports command-line programming

using Autoconf.sh or.bat scripts, like those that run the Autoconf macros for C and Perl. AutoCAD also provides Command Window automation. This enables the use of AutoLISP scripts to make decisions and store data, such as to control the drawing, or to add text, 3D elements, filters, etc. The general architecture is to enable the user to use a window containing all the scripting resources. AutoLISP scripts can be modified in any way without having to exit the environment. One side-effect of using an interface like this is that the user must switch to the scripting window in order to modify the scripts. To avoid this, the user can write scripts in the Direct Scripting Language (DSL), a simple, human-readable form of AutoLISP. A user can create an AutoLISP script (DSL script) directly in the CAD application itself. AutoLISP scripts can control and interact with the application, and call commands of the AutoLISP environment itself.

AutoCAD X3D AutoCAD X3D is a software application for the creation of 3D solid models and animations. Released in 2006, it was originally known as CATS - CAdditive Technology Solutions. AutoCAD Architecture AutoCAD Architecture is a stand-alone product built on the same technology as AutoCAD but targeted at architectural, interior design, product design, building technology, engineering and manufacturing. In 2015, the product was re-branded as Autodesk Architecture with no change to the product itself. AutoCAD Architecture allows users to digitize paper or scaled-down paper models and converts them into an intelligent 3D model on a computer

screen. The product is optimized for the creation of architectural visualizations, design concepts, multi-disciplinary design reviews, and for mass-production documentation. On December 8, 2019, Autodesk announced the discontinuation of AutoCAD Architecture, with no future plans for development or support. Autodesk Architectural Studio Autodesk Architectural Studio is a subscription service built on top of AutoCAD Architecture. Autodesk Architectural Studio is designed to help clients learn and create 3D models for construction projects, industrial products and multi-family buildings. a1d647c40b
