From the same team that created the Efham Internet booster, this application aims to take full advantage of every type of Internet connection, even the slower ones. It is compatible with all types of connections, including dial-up, ISDN, GPRS, DSL, UMTS, Cable Modem, HSDPA, closed networks and WiMax. This application promises to tweak your system in a way that you can obtain higher speeds without affecting the overall PC performance. Efham Internet Booster is compatible with most modern Windows OS, including XP, Windows Vista and Windows 7. No matter the version you have installed on your computer, the application can be used with no trouble. This program is not a standalone application; it relies on a tool called, Efham Internet Booster, which runs as a Windows Service. It is always advised that you run a registry backup or even create a system restore point prior to using this application, since the changes it performs might affect your computer, making it unusable. Even the program recommends this course of action and skipping this step is done at your own risk. The TCP optimization procedure relies on advanced algorithms that modify the registry entries to enhance the connection speed, while tweaking Internet Explorer results in a reduction of the time allocated to loading a webpage and an improvement of the overall browsing experience. As expected, a reboot is required for the changes to take effect. Additionally, Efham internet booster bundles options for obtaining detailed information concerning the hardware and the software configuration of your system. You can use this feature to find out every aspect regarding your computer components, such as the installed operating system, the system boot time, physical and virtual memory, connected network cards, Windows hotfix updates and more. Details on the network configuration can also be retrieved. The host name, IP and MAC address, adapter model, subnet mask are just some of the displayed data. Both reports are viewed using Notepad, so you can save them locally for further reference. Efham internet booster claims to have the solution to a slow Internet connection. However, it crashed on some occasions during our test, which makes us doubt its reliability.
