Choosing the best still camera for the job If you're interested in video, you need a camcorder. A camcorder has the advantage of shooting video and taking still images from the same view, but it also has a limitation: as a video camera, it records video only. You can't take still images with a video camera. Although many camcorders also take still images, the quality is low compared to that of a dedicated still camera. If you want to create high-quality moving images, you need

Adobe Photoshop is a professional photo editor application with an extensive feature set. Unfortunately, it is also expensive. This is the reason why many people use the Adobe Photoshop alternatives. The most common alternative is Adobe Photoshop Elements. It is an easy-to-use and affordable alternative to Adobe Photoshop. Adobe Photoshop Elements is better than Photoshop for several reasons. The most important advantage is the much lower price. Even though the professional version of Photoshop is free, there are many features that are only available in the paid version. The prices for Adobe Photoshop Elements ranges from \$80 to \$100. The more expensive the product, the more powerful it is. This is why Photoshop Elements is considered an affordable alternative to Photoshop. However, it is still an advanced program, albeit an inexpensive one. It is the perfect alternative if you're on a budget. Adobe Photoshop Elements is designed specifically for a beginner. Anyone with a basic knowledge of image editing will find it easy to use. It is designed for image editing, web design and retouching images. Adobe Photoshop Elements is the most accessible version of Photoshop. Adobe Photoshop Elements has become one of the most popular alternatives to Photoshop. It's hard to find a Photoshop alternative that has more features. Photoshop Elements has various options such as using pre-processed images, cropping images, reducing the size of images, and many other photo editing tools. Even though it is designed for beginners, it is also quite powerful. Here are ten reasons why you should consider using Adobe Photoshop Elements instead of Photoshop: 1. Its Filters Photoshop has more filters than any other image editor. However, many users prefer the Adobe Photoshop Elements filters. They have been carefully developed to be almost as good as the professional versions. It is easy to see the differences between the Photoshop filters and the Adobe Photoshop Elements filters. For instance, in the Adobe Photoshop Elements, you can see the color swatches, the Layers and the saved settings when you edit an image. In the professional version, you can easily use the toolbar to select an image, merge colors, or save the image in any format you wish. Adobe Photoshop Elements also has a new Grass Filter. By using the filter, you can quickly add a grainy effect to your images. There are many filters that you will miss in the Adobe Photoshop Elements. But it has less features than Photoshop. 2. A Namibian prime minister says British marines who were shot and wounded in an apparent cross-border raid will not face prosecution. Ope Benkolo said the matter would be handled by the Namibian government, which will not seek extradition of the British troops. The marines were shot on Monday in what happened to be the Netherlands' last deployment of the rotational force of the Global Force Task Force. The marines fired on the coordinates of what they believed to be a suspected al-Shabab militant in the Samburu district of southern Kenya. A Kenya Defence Forces spokesman said the 2nd Royal Marine Battalion had fired warning shots after an initial encounter. The Indian Ocean nation says any wounded people on Kenyan territory will be dealt with by Kenyan authorities.Q: How to find the sum of every column in a numpy array If I have the following numpy array: array([[9, 4, 8, 2], [4, 8, 6, 1], [0, 2, 5, 5], [8, 2, 0, 5]]) How can I find the sum of every column? I've seen this question, but I'm looking for a numpy solution. A: You can use numpy.sum, like: >>> np.sum(array) 49 A: The reason I got asked this question was because I was exploring the numpy.sum command and came across this piece of code that was using a for-loop to sum every column: for i in range(len(array)-1): total = array[0] for j in range(1, len(array)): total += array[j] print array array = total I wondered why numpy was not providing an in-built command to do this! so I began to ask how I could find the sum of every column in a numpy array. The best way to achieve this was to use numpy.sum. The output was array([49, 23, 28, 27]) A: In a slightly different way from @jezrael, here's a vectorised approach using NumPy's

Predictors of treatment adherence for women with endometriosis. The purpose of this study was to investigate the predictors of adherence to medical treatment for women with endometriosis. A retrospective analysis was performed by chart review of medical records of women who received a diagnosis of endometriosis and who had at least one follow-up visit during treatment in 2006. Variables considered were age, employment, marital status, diagnosis, symptom severity, length of follow-up, and adherence. Adherence was measured using the Morisky Medication Adherence Scale and using polysomnography. A total of 105 women with endometriosis were identified from the medical record database. There were 75% adherent women and 25% nonadherent women. The adherent group was older and had more severe symptoms than the nonadherent group. Adherence was also associated with a longer length of follow-up. There was no association between adherence and marital status, diagnosis, symptom severity, employment, duration of follow-up, or polysomnography. Older age, more severe symptoms, and longer length of follow-up are associated with adherence to medical treatment. Adherence to medical treatment should be included in the treatment of endometriosis. Lactulose and sorbitol increase aortic oxygen tension and blood flow in normoxic conditions. We studied the effect of lactulose and sorbitol on aortic oxygen tension and perfusion in anesthetized rats. Measurements were done in normoxic conditions (arterial oxygen tension, PaO₂-19.2 ± 0.5 mm Hg) and in conditions of hypoxia-reoxygenation (PaO₂-11.3 ± 0.4 mm Hg). Lactulose (11.4 ± 0.5 g/kg b.w.) and sorbitol (11.2 ± 0.5 g/kg b.w.) increased the aortic oxygen tension from 19.7 ± 1.0 to 22.0 ± 0.8 and 23.0 ± 1.7 mm Hg, respectively (P less than 0.001). Arterial blood flow (perfusion units) increased from 60 ± 3.0 to 70.5 ± 4.6 and 65.4 ± 2.8 perfusion units (P less than 0.001). In the hypoxic condition, lactulose and sorbitol increased PaO₂ from 8.7
