Mathematical formulas can be used as a mathematical drawing language, and there are several commercial and free CAD solutions for creating, viewing and editing mathematical formulas. Viewer Viewers provide three-dimensional, two-dimensional and user interfaces to the user. Raster image-processing software, including Adobe Photoshop, image editing software such as Adobe Photoshop, offers raster image-processing software, which can be used to modify image files and create two-dimensional representations of three-dimensional objects from the captured data. A typical example is to add a three-dimensional image, such as a sculpture, on top of a two-dimensional raster image of a three-dimensional object such as a print or a sheet of paper. Another example is to show the movement of the sculpture on top of a raster of a camera image captured from a video camera. Raster graphics editors, like Image Ready's Raster Graphics Editor or ConceptDraw Office's Raster Graphics Suite, can display two-dimensional representations of three-dimensional objects, such as a surface. Computer-aided design (CAD) tools, such as Autodesk's AutoCAD, can be used to create both 2D and 3D models of objects. CAD applications can be used to view CAD drawings and other 3D information, such as architectural models. CAD tools can be used for two-dimensional image viewing. For example, Autodesk's AutoCAD

or Autodesk 3ds Max, as well as the freeware MagicDraw can be used for 2D image viewing. Design review and approvals Most CAD applications have their own approval software. CAD users can review the drawings and set approval limits, such as total number of revisions, size limits and so on, on which they will approve the drawings. Some CAD applications, such as Autodesk Inventor, have their own software for approvals that do not require a separate tool. CAD can be used to create models of objects such as bridges and buildings, for which the model can be checked by the relevant authorities. An example is a boat or a bridge. The boat or bridge can be checked by the relevant authorities, such as the Highway Authority. Design reviews and approvals are used to review a design that is being prepared for the purposes of construction, to avoid costly problems during construction. Product design Product design has advanced in CAD applications. For example, In 5b5f913d15
