* Unlike some editing programs, Photoshop does not have a "none" setting to remove items from an image. An image editor must use one of the Delete, Erase, or Clear commands to accomplish this task. Check out the task at hand before selecting the appropriate tool. There may be one in the Edit menu (or a copy/paste command or just a delete command), but it may be easier to use one of the tools in the toolbox. 2. **Figure 2-2:** Start by opening an image in Photoshop. 3. **Figure 2-3:** The toolbox opens at the bottom of the screen and includes several tools for image-editing use.

Photoshop doesn't just edit images, however; it is also a powerful layout program. You see throughout this book where I use the tools in Photoshop to accomplish the various tasks described in this book. 4. **Figure 2-4:** The image in Figure 2-3 has three layers, so the Layers panel is open so you can see those layers. 5. **Figure 2-5:** Turn on the option to see the three layers that comprise this image, visible in the Layers panel. 6. **Figure 2-6:** Pick one of the toolboxes in the toolbox from the Edit menu to find the tool that is most appropriate for the task at hand. 7. **Figure 2-7:** A dialog box appears when you choose a tool. Your dialog box may look different because you use the right-click method to create menus, whereas I use the left-click method. For more about the right-click method, see the upcoming "Using the Right-Click Method" section. 8. **Figure 2-8:** The appropriate tool dialog box appears with the tool selected. 9. **Figure 2-9:** The tool has options that are available only when the tool is selected. For example, the Option icon is a symbol that appears when the tool is selected. 10. **Figure 2-10:** You see the dialog box for the task at hand on your screen. For now, you can change the tool options or use a shortcut to change the tool. For example, you can press the F key to select a tool or use the mouse's scroll wheel to change tools. Be careful with the mouse's scroll wheel, though, because it is

Q: jQuery if(\$(this).hasClass(...)) - any way to do it with.removeClass()? I know there are a few questions like this one, I just don't know how to use them. I am trying to convert some PHP code to work in jQuery. So I have this code below which works perfectly fine in PHP, but I was asked to convert it to jQuery (since the code is for WordPress): I have tried doing the same thing using jQuery: if (\$(this).hasClass("bold-black")) { // some

Strange night in UConn front office
A scuffle broke out between players and coaches in a basketball function in Storrs, Connecticut, Saturday night, after UConn officials refused to give a local college player a high five. Yahoo Sports reported that according to police documents obtained by Yahoo, after the players and coaches came to an agreement over the rule in dispute, the students walked off the court and began protesting, with a coach telling them to "get off the court," and "get out of here." The students responded by shouting and spitting on the officials, with a total of seven police officers on scene. One of the officials told officers he had asked the players to come to his office and discuss their issues with him, but they ignored him. According to the police reports, in the midst of the incident, a female official told the players to "get out of here" and two of the players then confronted a different female official, then "came in close proximity to her face and spit." In the altercation that followed, the female official told police that she tried to avoid the spit by stepping back, but the male official came towards her to try to calm the players down. "This individual then immediately came in close proximity to her face and spit," the official stated, according to the reports. Police found some of the players involved in the altercation intoxicated and took them into custody for disorderly conduct and public intoxication. One player, who was arrested, was allegedly found to be in possession of marijuana, according to the police documents. The two officers involved in the arrest were not named in the documents. The incident was largely over before the police arrived on the scene, and they only dispersed the players and coaches after getting an update about the incident from the UConn officials. "A coach was left bloodied in the back after the altercation. We are not releasing his identity or the name of his school at this time due to the nature of his injuries," the documents stated. Players told Yahoo that the female official had been yelling
