The Laval Ice Sheet is now covered in ice again after a rapid melting of its ice during the summer, but it is still one of the most spectacular sights in the Canadian Arctic.I recently saw a cartoon on TV showing a man at the top of a small hill, staring down on a bustling city below. It made me think of my first week of programming in college. I started out with C on an old IBM PC. I started writing simple programs. At the end of week one I knew how to add 2 numbers, display a character on the screen, and print a character on the screen. I was ready to go! I started writing assembler on the IBM PC. The thought of how I was going to lay out all of the registers and stack was overwhelming. Luckily I had a professor that knew the ins and outs of the IBM PC, and the CPU. He taught me a simple rule to remember: "If the number is 6 digits then it's a register, if it's 5 then it's a constant". That rule saved me from a lot of mistakes in the past. My next programming experience was on a C64. I programmed in BASIC. I think I remember creating a 1-1-1-1-1-1-1-1-1 block of memory and making it
