Note that the first graph shows total US production, so that Mexico's total production is excluded from the graph. That's because Mexico does almost nothing in the labor intensive sector of the economy, and it does not export to the US in substantial quantities of output, so its contribution to total US output is essentially zero. Meanwhile, the second graph shows total production in the US. If you're allowed to assume that the output of a certain sector can be divided up into production in the US and production in Mexico without any substantial
