AutoCAD is often used in the construction industry to design building plans, from drawing and drafting to creating architectural 3D models and 3D visualization, for presentation and construction of construction documents. AutoCAD is also used in the automotive industry to produce car parts, such as sheet metal parts and plastic parts for automotive body panel replacements, and automotive design and engineering. History Early History AutoCAD started out as a 16-bit personal computer application, AutoCAD Version 1.0, released on December 21, 1982 by Autodesk, Inc. The first release of AutoCAD was on one of the first personal computer games, the Atari 800. Version 1.0, released in December 1982, was an 8-bit application that used the Atari 8-bit (8-bit Atari) family of microprocessors (released by Atari, Inc.) for its microcomputer and graphical capabilities. The program's basic design, as well as the interface with the system, were developed by Andy Hertzfeld, who was the software developer for Apple's Lisa, and later, Macintosh computers. The software was produced by the staff at Logo-O-Matic, a company that Hertzfeld co-founded. Logo-O-Matic produced and released six programming languages for the Apple II computer, and created a word processor called TextBuilder for the Apple II. The early Apple II versions of AutoCAD ran in 640 x 340 pixel resolution, making it the first operating system based 3D drawing package for personal computers. This version of AutoCAD was a simple computer-aided drafting program, and contained only the functions necessary to create a layout drawing. The earliest versions of AutoCAD did not include functions to edit drawings, project budgets, or use styles. Version 2.0, released in April 1983, was the first version of AutoCAD to have a full-featured editor and running under DOS. It was also one of the first programs to ship with an insert dialog box. It was designed to work under MS-DOS. A number of companies, including SMPTE, in the early 1980s, were working on a standard known as VT340 that would provide many of the functions required by an advanced CAD program. Version 2.0 made some standardization of those functions available. AutoCAD 2.0 was licensed by Atari, Inc. for sale to other companies for \$500 and was priced at \$1495 when
