Appendix 2: Data availability {#appendix-2-data-availability.unnumbered} ===== Continuation of the paragraph in Appendix 1. The following tables give the PDEs that were checked against the numerical solutions by means of the shooting method. Data for the fourth and sixth order equations are provided in Tables [abcd] and [abcdW], respectively. They provide the PDEs, the shooting parameters for h and h^* , and the resulting solution. The sixth order equation, in particular, is difficult to solve, because of the presence of the fifth order term. All computed solutions are given in the standard [mathematica] notation. Appendix 3: Outlook of the paper {#appendix-3-outlook-of-the-paper.unnumbered} ===== It is foreseeable that the results reported in this paper find further applications, e.g. for the numerical treatment of systems that can be considered as semiclassical versions of the second order momentum/mass equation of free Dirac's equation (such as the quark-antiquark potential of the [SU(3)] principal-component model).
