The purpose of this study was to systematically review the risk factors for spinal metastasis and to help clinicians with prognostic estimation. This systematic review was performed according to the guidelines of the Preferred Reporting Items for Systematic Reviews and Meta-Analyses (PRISMA) statement. A systematic search of the PubMed, Scopus, and Embase databases was performed for original research from January 2002 to March 2017. Studies that evaluated the risk factors for spinal metastasis and/or the prognostic value of such risk factors were included. A total of 11 studies were eligible for inclusion. Age (≥65 years old), malignancy type, and T-stage were the only risk factors identified. However, there is no agreement among researchers concerning the risk factors of spinal metastasis. The relative risk of spinal metastasis ranges from 1.5 to 4.0, with a wide range of confidence intervals. Prognostic factors may help to better estimate prognosis in patients with spinal metastasis. This systematic review will clarify risk factors and may help clinicians with prognostic estimation in patients with spinal metastasis.Q: What type of Html.Serialize How are the Html.Serialize methods for ASP.NET MVC implemented?
