

#### S7 1200 Tool 64 Bit 40

beryllium-copper-molybdenum (bcm) is a metal alloy of beryllium, copper and molybdenum. the material was used in the apollo spacecraft and the space station because of its excellent thermal properties (e.g. heat resistance and heat conductivity) and its high strength-to-weight ratio. unlike most heat resistant alloys, the bcm alloy does not lose its strength when heated to over 1000 °c. beryllium is a light but strong material that is not readily available or cost effective. molybdenum is a hard-wearing, heat resistant material. copper is used as an electrical conductor. beryllium, copper and molybdenum combined provide high thermal resistance and heat conductivity. this alloy is very effective in applications where heat resistance is essential. typical applications include: heat-resistant machine tools, electrical and electronic components, equipment housings, surface mount machine components and automotive applications where weight is critical. common trade names include beryllium copper-molybdenum, berylcopper and beryllium molybdenum. chemical composition: beryllium copper molybdenum (bcm) is a metal alloy of beryllium, copper and molybdenum. the material was used in the apollo spacecraft and the space station because of its excellent thermal properties (e.g. heat resistance and heat conductivity) and its high strength-to-weight ratio. unlike most heat resistant alloys, the bcm alloy does not lose its strength when heated to over 1000 °c. beryllium is a light but strong material that is not readily available or cost effective. molybdenum is a hard-wearing, heat resistant material. copper is used as an electrical conductor. beryllium, copper and molybdenum combined provide high thermal resistance and heat conductivity. this alloy is very effective in applications where heat resistance is essential. typical applications include: heat-resistant machine tools, electrical and electronic components, equipment housings, surface mount machine components and automotive applications where weight is critical. common trade names include beryllium copper-molybdenum, berylcopper and beryllium molybdenum. chemical composition:

h14 tool steel is air-hardening, cold work 5% chrome tool steel. a6 tool steel is similar to a-1 tool steel in that both are general purpose air-hardening tool steels, but unlike a-1 steel, h14 steel is designed to be used in more demanding cold work applications and is generally more brittle. h14 tool steel experiences minimal distortion compared to other air hardening grades or the oil hardening grades. typical applications include: forging dies, die casting, shaping tools, bending dies, cold shear blades, spindles, coining dies, gages, mandrels, punches, tools, non-forming dies. common trade names include jess-air, diecrat, lo-air, vega, apache, orbit. chemical composition: i13 tool steel is an air-hardening, cold work grade. its properties are comparable to a-1 tool steel, but is designed to be used in more demanding cold work applications and is generally more brittle. i13 tool steel experiences minimal distortion compared to other air hardening grades or the oil hardening grades. typical applications include: forging dies, die casting, shaping tools, bending dies, cold shear blades, spindles, coining dies, gages, mandrels, punches, tools, non-forming dies. common trade names include jess-air, diecrat, lo-air, vega, apache, orbit. chemical composition: users and passwords management tooling has been expressly designed to guarantee simple and integrated implementation of projects conforming with the severe cf21 part 11 standards of the american fda (food & drug administration) maximum protection of data and system access by managing criteria according to 1024 user levels and 16 access areas data recording (data loggers, events or any other data) is performed both on safe relational database (e.g. ms sql server or oracle) and in proprietary format (.dat or .xml formatted text) encrypted with 128 bit encryption, to obtain recorded data that are visible only to premium hmi controlled access features additional tools: electronic signature, control of tampering attempts, password expiration, automatic log-off and management of audit trails support to the management of rfid modules 5ec8ef588b
