After playing around with the mobile version of Photoshop (CC) for a while, it was clear that some major changes were needed as far as speed and app complexity. These changes were made for the 2017 release of Photoshop and with the release of Photoshop CC 2015, this feature set was ported over from the mobile version. In terms of feature set, Photoshop CC 2015 is great, but some specific changes in the way that Photoshop works meant that it wasn't possible for the mobile / PC version to be exactly the same to work in exactly the same manner on both platforms. After testing Photoshop CC 2015 on the iPad Pro (It's really good on the iPad Pro and is also suitable for a desktop version) for a while, I will be announcing that support for the iPad Pro will be coming to Photoshop CC 2015 this New Year. Adobe Arrange functionality is focused around the Toolbox. Instead of creating a new panel, navigate to the Toolbox (next to the File menu), then click the Arrange button to access the new Layers Organizer and Arrange functions. The Layers Organizer allows you to select multiple layers, as well as the following: Reorder, Reposition, Split, Merge, Flatten, Darken/Lighten, and add or remove layer effects. As Photoshop and creative professionals know, layers are the building blocks of every image. Whether you're working on a single layer (such as a photo) or hundreds (such as a set of multiple images), the Layers panel is where you work. Today, in Photoshop CS6, there are many new ways to work with layers you'll appreciate. Instantly duplicate layers without extras. Just right-click a layer, and click Duplicate or Duplicate Selected. You can then move, edit, and clone duplicate layers together to quickly create complex images.

People working on the same project receive notifications for review requests and can then send comments to the reviewers, right inside Photoshop. The tool also lets users annotate and approve edits from within the tool, and automatically updates the project version. "With the new Share for Review feature, Photoshop now allows users to work collaboratively in Photoshop with their colleagues on the go, with the ability to seamlessly upload and receive edits from anyone by simply linking their email addresses," said Christian Barron, vice president/general manager, Creative Cloud.
