The recently-introduced selection tool and selection modes have been thoroughly optimized and adapted to conserve space and improve the overall design of the interface. Using the new tools, users can select text, pixel-based objects such as selections and shapes, full-color pixels, or black-and-white documents. Selective editing tools are a brilliant idea, and the same idea worked well in the new release of Photoshop. Initially, it was not clear why the Select tool was more than twice as wide as the Brush tool, but the new Photoshop makes both tools identical in width. This is a much less of a problem now, but it's worth noting.

Advanced adjustment users know that you can get the most out of adjustments simply by adding layer masking, and you will still be able to do so in this version of Photoshop. Depending on how you modify the hundreds of different features in Photoshop, you can make the pixels of your images appear brighter, darker, or the same. For Windows, a new experimental feature called DoubleClick to Open lets you quickly view and modify a layer without opening the image in Photoshop. If you need to work on the file, you can simply open it without re-clicking the file to open it in Photoshop. To activate this feature, go to File > Preferences > " Photoshop " > " Painting " > " DoubleClick to Open". Once activated, the tool will appear on the left side of the Photoshop UI, as shown in the screenshot below. The new version of Photoshop also brings multitasking improvements that make it easier for users to work on multiple images simultaneously in Photoshop. The previous version of Photoshop was limited to two images open at the same time, even when there was more than one monitor displaying the application. The first tool we have listed is the 'Filter' tool. The Filter tool makes it possible to accurately correct color, exposure, depth, etc. by choosing the tools such as Gradient Map, Lighten/Darken, Sharpen, Levels or Replace Color. But, one has to be careful while selecting these tools because they are not made for beginners and a friendly interface is missing. The second tool that comes to the list is the tool to unlock images. It is called the Content Aware Fill. The tool has the ability to automatically fill in the background of a picture. Many image editors and Designers use a similar tool but it has some unique features. It is not restricted to what type of images it can process and it can change the layers, style and frames. But, one thing to keep in mind is that the tool does not work on all images. The third tool in the list is 'Magic Wand'. The tool that was created to remove unwanted elements from pictures works just like a magic wand. Using the tool, a user can click the spot and the selected element is removed. This tool removes unwanted elements such as text, red-eye, unwanted bubbles and large objects. The user can also custom tailor the tool for the desired elements.
