In the past, I've used the older versions of Lightroom to edit the RAW data recorded from my Canon EOS-1D Mark IV with the Rebel T5i, and I've also used the latest version of Lightroom on my iPad 1. But since Lightroom 5 is version 5.3.1, it should be stable in comparison to the current version of the software, which is version 5.2.10. Despite the low version number, the latest version of Lightroom is a massive upgrade across the board. For now, let's dive into what's new. When the new version of Lightroom first shipped, I was disappointed to find that it no longer provided version-specific settings. The most recent versions of Lightroom include the following application categories, which are similar to the ones you see in version 5: Libraries, Photos, Presets, and the last one, Videos. The first quality of a software update is that it should provide these features. In the previous Adobe Photoshop version, there was a whole lot more to it than just presets and libraries. I was pleased to see that lots of people out there were already, and are still, using the program. One of the most pleasant surprises for me was the inclusion of Photoshop-compatible patterns. Adobe has long supported vector-based patterns, but it wasn't until the release of version 5 on the Mac OS that the first set of PS-compatible installation files went live. I was impressed with how elegant these patterns work within Lightroom, as they look much better than the ones that come stock with the Mac version.

Many of the functions that make the software worth the cost are not accessible from the right-click menu, and they include the Auto-repair and Liquify tools, plus the option to change the resolution of the image. That said, the most powerful tools in Elements are the powerful selection tool and healing tool. Both are accessed from the left-click menu, as is the watermark, which is dynamic -- instead of creating a watermark image from scratch, you can choose to add a perfectly sized watermark later.

- Share for Review, a new feature that enables Photoshop creators to easily invite creators to collaborate when working on the same image. Craft collaborative projects on the go without worrying about losing work or leaving Photoshop. Share for Review is a beta. Share for Review enables advanced image editing teams to work together without leaving Photoshop. Because Photoshop is the fastest way to edit, it's the ideal environment for lower-level tasks, such as retouching, corrections and color grading. However, after you develop your edits, you eventually need to share them with other members of a creative team. Now you can use Share for Review from anywhere, on any device, without ever leaving Photoshop. While in Photoshop, click the gear icon, select Share for Review, and invite collaborators. When you send a project invite, it automatically detects when your collaborators have updated their work. For the most part, Recents shows updates to the assets that you use most frequently. Sidebar panels also include sections devoted to favorites, experiment images, photos that you've shared with others, and shared images.
